Professional Summary

Final-year BIT undergraduate specializing in Network and Mobile Computing, with hands-on Quality Assurance experience gained through a Software QA Engineering internship and independent test automation projects. Skilled in developing UI and API test automation frameworks using Selenium WebDriver, Playwright, and Postman/Newman. Practical experience in manual testing, test case design, defect reporting, and creating QA documentation. Solid understanding of SDLC, STLC, Agile/Scrum practices, and CI/CD-integrated test execution using GitHub Actions. Seeking an entry-level QA Automation Engineer, Software Test Engineer, or Associate QA Engineer role to apply automation and QA skills within a professional software team.

Technical Skills

QA & Manual Testing: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Exploratory Testing, UI Testing, Test Case Design, Test Scenario Design, Test Planning, Bug Reporting, Defect Lifecycle, Severity & Priority Classification, SDLC, STLC, Agile/Scrum, Jira (Basic)

Automation Testing: Selenium WebDriver, Playwright, TestNG, Page Object Model (POM), Data-Driven Testing, ExtentReports, Cross-Browser Testing, Test Automation Framework Development, Maven

API Testing: Postman, Newman CLI, REST API Testing, JavaScript Test Scripts, JSON Schema Validation

Version Control & CI/CD: Git, GitHub, GitHub Actions, Docker (Basic)

Programming: Java, JavaScript, TypeScript, Python

Databases & Backend Technologies: PostgreSQL (Supabase), Firebase Realtime Database, MySQL, REST APIs

Web Technologies: HTML, CSS, PHP, React, React Native, Next.js

Tools & Platforms: Node.js, Linux

Professional Experience

SoftwarePlus Pvt Ltd, Sri Lanka

Current

Software QA Engineer Intern

- Contributed to full-cycle manual QA for a 2-portal enterprise HRIS platform (SpaceXP), authoring test plans and bug reports in Excel across 167+ test cases for the Admin and Employee modules.
- Authored QA documentation - test plans, test scenarios, and RTM - for a Student Management System project, executing 10+ test cases across Chrome, Firefox, and Edge.
- Tracked defects through the full bug life cycle (New to Closed), improving defect traceability between QA and development.
- Executed automated UI and API test scenarios using Selenium WebDriver and Postman, improving regression testing coverage.

QA Automation Projects

Prysal Creative Hub | Freelance Project - QA Automation Engineer & Full-Stack Developer

Next.js, Playwright, JavaScript, Supabase, GitHub Actions, Vercel

Live: prysal-creativehub.vercel.app

GitHub: github.com/Desh07/prysal_creativehub

- Refactored the Playwright automation framework to implement the Page Object Model (POM) design pattern, reducing code duplication, improving maintainability, and simplifying future UI updates.
- Developed a comprehensive Playwright End-to-End (E2E) automation suite covering authentication, critical user workflows, cross-browser compatibility, and mobile responsiveness, significantly reducing manual regression testing effort.
- Implemented CI/CD quality gate using GitHub Actions to automatically execute the Playwright test suite on every push and prevent Vercel deployments whenever critical tests failed.
- Developed automated API and authentication tests to validate HttpOnly cookie-based session management, authentication workflows, protected API endpoints, and appropriate HTTP status code handling (including 401 Unauthorized responses).
- Independently developed a dual-portal Headless CMS using Next.js 14 and Supabase, providing end-to-end understanding of application architecture, API workflows, and business logic that strengthened automation testing, defect analysis, and root cause investigation.

Playwright E2E Automation Framework

Playwright, TypeScript, Node.js, GitHub Actions, Git

GitHub: <https://github.com/Desh07/playwright-ecommerce-automation.git>

- Architected an end-to-end test automation framework from scratch using Playwright and TypeScript to validate critical business workflows on an e-commerce platform, including cart, checkout, and authentication flows.
- Implemented reusable test architecture to automate critical e-commerce workflows including authentication, shopping cart management, checkout, and order validation, improving test organization and scalability.

- Implemented dynamic test data generation scripts to create unique user profiles on the fly, enabling reliable parallel test execution without data conflicts.
- Integrated the automated test suite into a CI/CD pipeline via GitHub Actions, providing rapid developer feedback and automatically generated HTML execution reports.

Selenium E-commerce Automation Framework

Java, Selenium WebDriver, TestNG, Maven, ExtentReports, GitHub Actions

GitHub:
<https://github.com/Desh07/saucedemo-selenium-automation-framework.git>

- Designed and developed a scalable UI test automation framework using Java and Selenium WebDriver to validate critical e-commerce workflows.
- Implemented the Page Object Model (POM) design pattern to separate UI locators from test logic, improving code reusability and reducing maintenance overhead.
- Executed data-driven testing using TestNG DataProviders to validate application behavior across multiple data sets efficiently.
- Integrated ExtentReports with automated screenshot capture for clear failure analysis, and configured a CI/CD pipeline via GitHub Actions.

REST API Automation Framework

Postman, Newman, JavaScript, Node.js, GitHub Actions, Git

GitHub:
<https://github.com/Desh07/api-testing-postman-project.git>

- Automated end-to-end REST API testing workflows for CRUD endpoints using Postman, ensuring the reliability of backend services.
- Developed JavaScript test scripts and assertions to validate response payloads, HTTP status codes, JSON schema formats, and API performance behavior.
- Integrated the Newman CLI test suite into a GitHub Actions CI/CD pipeline, enabling continuous automated execution on every code push with interactive HTML reports.

Manual Testing Project

SpaceXP HRIS - Manual QA Testing (Admin & Employee Portals)

Manual Testing, Excel, Test Case Design

GitHub:
<https://github.com/Desh07/HRIS-Manual-Testing-Project.git>

- Authored a complete QA documentation suite consisting of test plans, test case documents, bug reports, and Excel test summaries for a 2-module enterprise HRIS platform.
- Designed and executed 167 manual test cases across Admin and Employee portals, identifying and documenting 62 defects classified by severity.
- Identified critical-severity defects, including payroll session termination failures and a recurring UI failure where user actions completed without appropriate feedback messages.
- Resolved bug-ID traceability discrepancies between test case documents and bug reports, ensuring consistent defect tracking.

Education

Horizon Campus, Sri Lanka <i>BIT (Hons) in Networking & Mobile Computing</i>	Expected Graduation: 2026
Zahira College, Matale (National School), Sri Lanka <i>Advanced Level</i>	2020

Certifications

Postman API Fundamentals Student Expert - Postman	2026
• Hands-on API testing: sending requests, validating responses, and writing test scripts in Postman.	
Python for Beginners - University of Moratuwa	Jan 2025
• Completed foundational Python programming. Verification code: 8hytIxHHAs.	

Languages

English (Fluent), Tamil (Native), Sinhala (Conversational)
